SUMMARY

Frontend Developer with ~3 years of experience shipping production Angular, Ionic, and React applications for retail-commerce and identity platforms. Deep in TypeScript and RxJS-driven state management, reusable component architecture, and responsive mobile-first UI. Experienced with frontend performance (CDN delivery, query optimization), analytics instrumentation (MoEngage, Sentry), and E2E testing with Playwright — with AI-assisted development (Claude Code, Cursor) integrated into component building, refactoring, and test authoring.

WORK EXPERIENCE

Rozana Rural Commerce Pvt Ltd — Bangalore, India — Oct 2025 – Apr 2026

Software Developer (Angular / TypeScript)

Marketplace Application — Sole Frontend Architect (Angular / PrimeNG)

- Sole architect and developer of a complete marketplace platform: responsive product catalog with search and filtering, shopping cart, checkout workflow, authentication, and profile management.
- Built an admin dashboard for end-to-end catalog, order, and inventory management, and integrated a payment gateway into the checkout flow.
- Delivered a fully responsive, accessible UI/UX targeting both mobile and desktop experiences.

  Tech: *Angular, PrimeNG, TypeScript, RxJS*

CMS Dashboard (Angular / TypeScript)

- Added User Type Management to facility creation/editing — configurable minimum purchase amounts and cancellation policies per user type, built with dynamic form controls and API integration.
- Built a Channel Management System: designed the Channel TypeScript entity, implemented the getChannels() API service, and integrated channel selection across product and facility modules with conditional UI rendering.
- Enhanced Pricing Management by unlocking BP/MRP fields for direct inline editing, eliminating a two-step edit workflow and reducing clicks for daily pricing operations.

  Tech: *Angular, TypeScript, RxJS, AWS S3, CloudFront CDN, REST APIs*

Rozana Shipper — Supplier Dashboard & Reporting (Django / Python)

- Built the supplier-facing dashboard with advanced filtering (order status, SKU, courier, date range) and task-status tracking; backend work included a KYC document pipeline on AWS S3 and Celery-based CSV reporting over 10,000+ orders.

  Tech: *Django, DRF, Celery, PostgreSQL, AWS S3*

Headrun — Bangalore, India — Jun 2024 – Oct 2025

Software Engineer (Angular / Ionic / TypeScript)

Point of Sale (POS) System (Angular / Ionic / PrimeNG)

- Developed and enhanced a production POS application with scheduled deliveries (Delayed Wheels), priority-based order handling, and real-time form validation using PrimeNG.
- Built Rozana Wheels, a mobile van sales platform using the Geolocation API for GPS-based marketplace detection, vehicle management, and location-aware order processing.
- Developed a consignment tracking module with TMS API integration — shipment status timelines and OpenStreetMap route visualization.
- Built a reusable promotion-management component with structured UI, coupon handling, and dynamic rendering; integrated coupon codes into the order pipeline.
- Fixed search-filter state persistence across pagination in the Invoices module, improving UX continuity.
- Integrated MoEngage analytics for order-lifecycle event tracking with structured payloads and non-blocking error handling via Sentry.

  Tech: *Angular, Ionic, TypeScript, RxJS, PrimeNG, Tailwind CSS, OpenStreetMap, MoEngage SDK, Sentry*

POS E2E Test Automation (Playwright / TypeScript)

- Built a Playwright + Page Object Model framework covering Billing, Invoices, Move Inventory, and Location Management, automating OTP login, barcode scanning, inventory moves, and invoice printing with edge-case coverage and multi-environment (UAT/Prod) configuration.
- Used AI coding assistants (Claude Code, Cursor) to scaffold page objects and reusable component boilerplate, generate edge-case test data, and assist refactoring — with manual review of all generated code before merge.

  Tech: *Playwright, TypeScript, dotenv*

Unisys India Pvt Ltd — Bangalore, India **Sep 2023 – May 2024**

Associate Software Engineer

Stealth Identity (React.js)

- Designed and implemented responsive UIs with React.js; built reusable component libraries using props & composition patterns, cutting per-project coding time by ~15 hours.
- Integrated scoped CSS modules for a modular codebase, accelerating feature iteration and eliminating styling conflicts.
- Led CDN migration from direct AWS S3 URLs to CloudFront, improving image delivery performance across the application.
- Automated UI testing with Selenium and Cucumber, reducing testing time by 30%.
  Tech: *React.js, CSS Modules, AWS S3, CloudFront, Selenium, Cucumber*

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, SQL, Python

Frontend: Angular, Ionic, React, PrimeNG, Tailwind CSS, CSS Modules, Responsive / Mobile-First Design

State Management: RxJS Observables, Reactive Programming

Testing: Playwright (E2E, POM), Selenium, Cucumber

Performance & Delivery: CloudFront CDN, AWS S3, REST API Integration, Geolocation API

Analytics & Monitoring: MoEngage SDK, Sentry

AI-Assisted Development: Claude Code, Cursor, Windsurf — agentic coding, component scaffolding, AI-assisted code review & refactoring, test generation

EDUCATION

Siddharth Institute of Engineering and Technology **Jun 2018 – May 2022**

B.Tech, Computer Science and Engineering | GPA: 7.67
